

Sierra

stitch
era Universal
free embroidery software

Stitch Era Universal is the first embroidery software
for the creation of embroidery designs

complete and integrated,
modern and advanced,
and free for the end user.

stitch era Universal

Stitch Era Universal is not a small limited program that performs just a few specific functions. Stitch Era Universal is a huge, modern and complete system that works with embroidery designs, more powerful, easier to use than many existing applications, and it comes to you at literally no cost.

Transform your ideas into awesome, high-quality embroidery designs with Stitch Era Universal, the most advanced and productive software you could ask for, at a never-heard-of price of zero dollars.

Free? Then I want 2!

Much more than that the user can install this genuine and legal version of Stitch Era Universal in as many computers as desired, to use at the office, at home, while traveling, etc.

Where to get it?

Stitch Era Universal can only be distributed by a Sierra Technology Group Authorized Dealer. Duplication is not allowed. Support your dealer so that this service can improve even more!

Any limitations I should know?

Yes, the most important are: (1) the installation, activation and use of this software will require permanent connection to the Internet, (2) stitch count per design is limited to 40,000 sts, (3) basic technical support service is somehow limited.

At any given time we are able to offer a cost-based solution that can work as a stand-alone program independently from an internet connection, with not only more features & benefits but also with professional training and technical support services included.

Do not hesitate another moment! Get Stitch Era Universal today from your Authorized Dealer!

Art Tools

The embroidery creation process starts with images from different sources that can be processed with Stitch Era Universal (bitmap images, vector art, graphic files, scanner or camera input, captures from other graphic applications).

Lettering Systems and True Type Fonts

Customize your stitch creations in seconds with embroidery texts in different shapes and sizes, using any of the several Embroidery Fonts included or choosing from the many True Type fonts available.

Stitches Edition

Edit, manage and alter existing stitch files using an advanced Stitch Editing module, creating new designs with ease.

Royalty Free Embroidery Software

From Art to Embroidery Automatically

The program offers options for those who want to create embroidery samples almost instantly by automatically converting the art in embroidery designs.

Professional Design Creation

The application has a complete set of conventional digitizing tools, including a varied selection of stitch types that can be adjusted for each work. The automated digitizing modes offer you a highly productive working environment.

Sophisticated Artistic Designs

Making real masterpieces as the ones displayed in exhibitions and magazines require intricate tools. The software includes such functions that allow you to build designs as the experts do, achieving the same potential for quality and stitch effects.

Galleries of Designs, Parts and Components

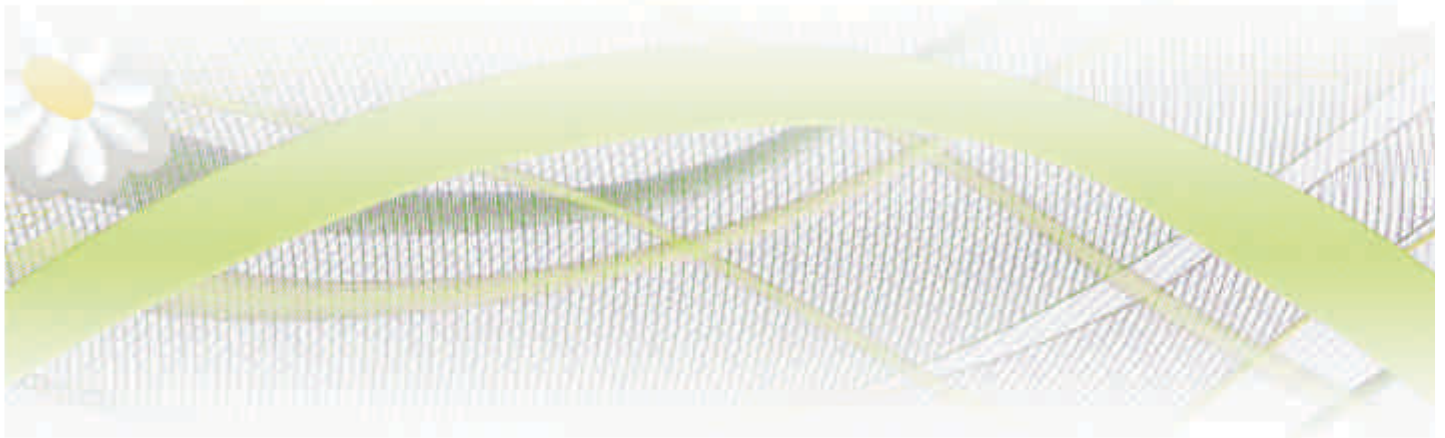

In the toolbars as well as in the auxiliary windows, you will find graphic libraries of designs, images, motifs, fill types and others. The samples of these objects are realistic simulations, speeding up their selection.

Can you afford not to have stitch era Universal?
